

# 1) Increase/Decrease Quantity: Buttons on Cart Page

## 1. Display + and – Buttons

- Next to each cart item's quantity, show a “+” button to increase quantity, and a “–” button to decrease it.

## 2. Increment Quantity

- When the “+” button is clicked, the item's quantity increases by 1.
- The Cart context or state updates accordingly.

## 3. Decrement Quantity

- When the “–” button is clicked, the item's quantity decreases by 1 (but never goes below 0, depending on business logic).

## 4. Real-Time Price Update

- The total cart price and each item's subtotal (price \* quantity) should recalculate immediately upon any change in quantity.
